To: U.S. Michigan Corps of Engineers:

Concerned citizens are urging the U.S. Michigan Corps of Engineers to say "NO" to ALL permits for the Aquila Resources Back Forty Mine Project.

I believe that, historically, Sulfide Mining pollutes the environment and degrades the quality of life near the mines. Since 1990, one tenth of our nation's wilderness has been lost.

The local 2 miles of road through State Land would require 66 feet of right away going to the proposed mine. Will this help citizens and sportsmen? Plus a side road with traffic lights on each end to bypass Indian Burial Grounds? Come on. We need to protect our Aquifers, Menominee River and Green Bay, our drinking water and fisheries.

Please reply to our concerns.

To: U.S. Michigan Corps of Engineers:

Concerned citizens are urging the U.S. Michigan Corps of Engineers to say "NO" to ALL permits for the Aquila Resources Back Forty Mine Project.

I believe that, historically, Sulfide Mining pollutes the environment and degrades the quality of life near the mines. Since 1990, one tenth of our nation's wilderness has been lost.

The local 2 miles of road through State Land would require 66 feet of right away going to the proposed mine. Will this help citizens and sportsmen? Plus a side road with traffic lights on each end to bypass Indian Burial Grounds? Come on. We need to protect our Aquifers, Menominee River and Green Bay, our drinking water and fisheries.

Please reply to our concerns.

I believe that, historically, Sulfide Mining pollutes the environment and degrades the quality of life near the mines. Since 1990, one tenth of our nation's wilderness has been lost.

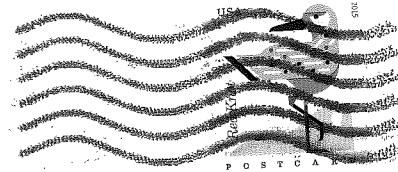

The local 2 miles of road through State Land would require 66 feet of right away going to the proposed mine. Will this help citizens and sportsmen? Plus a side road with traffic lights on each end to bypass Indian Burial Grounds? Come on. We need to protect our Aquifers, Menominee River and Green Bay, our drinking water and fisheries.

Please reply to our concerns.

To: U.S. Michigan Corps of Engineers:

Concerned citizens are urging the U.S. Michigan Corps of Engineers to say "NO" to ALL permits for the Aquila Resources Back Forty Mine Project.

I believe that, historically, Sulfide Mining pollutes the environment and degrades the quality of life near the mines. Since 1990, one tenth of our nation's wilderness has been lost.

The local 2 miles of road through State Land would require 66 feet of right away going to the proposed mine. Will this help citizens and sportsmen? Plus a side road with traffic lights on each end to bypass Indian Burial Grounds? Come on. We need to protect our Aquifers, Menominee River and Green Bay, our drinking water and fisheries.

Please reply to our concerns.
